Master Key Systems

# Your trustworthy partner for smart access solutions

No matter where you need innovative, reliable access and security solutions, we are there for you with our high-quality portfolio: in hotels, shops, sports facilities, airports, hospitals, at home or in the office.

We are one of the top three companies for access control and security solutions in the global market. We provide everything you need for secure access to buildings and rooms, all from one single source.

More than 16,000 employees and numerous cooperation partners are ready to assist you in over 130 countries. So no matter where you are, you can benefit from our range of future-oriented products, solutions and services that give you a sustainable sense of security.

## **Mechanical key systems** Keep your keys under control

As infrastructure grows exponentially, so does the need to support this development with adequate security systems. Increased access points result in multiple locks that require efficient security management. This is where the dormakaba master key systems come in, by enabling access according to our customers' requirements and using entry restrictions to their advantage.

A master key system is a key plan whereby selected keys can open a number of pre-defined doors. It extensively analyses and assesses our customers' requirements. Moreover, it can deliver solutions for even the most complex access management challenges and helps maintain better control, saves key replacement costs and is convenient, as there are a lower number of keys in circulation. It also provides quick access to all rooms within the premises, e.g. for security staff and management personnel. This is not only convenient but can save lives in case of emergency.

With a mechanical key system, you control your keys and access rights, providing quick access to all rooms within the premises and saving key replacement costs.

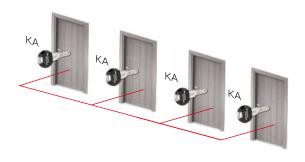

## **Customised access management** Cleverly organised with master key systems

Master key systems is a complete product range that provides the most extensive access security solutions, which can be customised for large facilities to smaller solutions for niche customer profiles. The various typologies of dormakaba master key systems are as illustrated below:

#### Key to Differ (KD) Each cylinder can be operated by its own key.

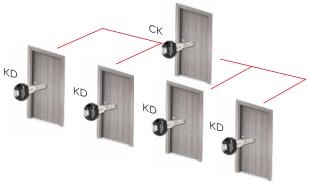

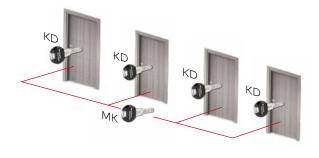

#### Keyed Alike (KA)

Several cylinders with the same permutation can be opened by the same key.

#### Common Lock Systems (CK)

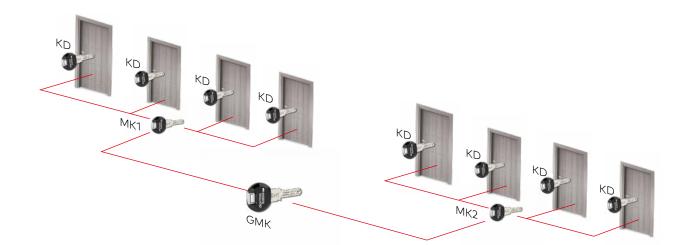

Each key opens only its own cylinder and the centrally locking system (e.g. the common entrance in an apartment block).

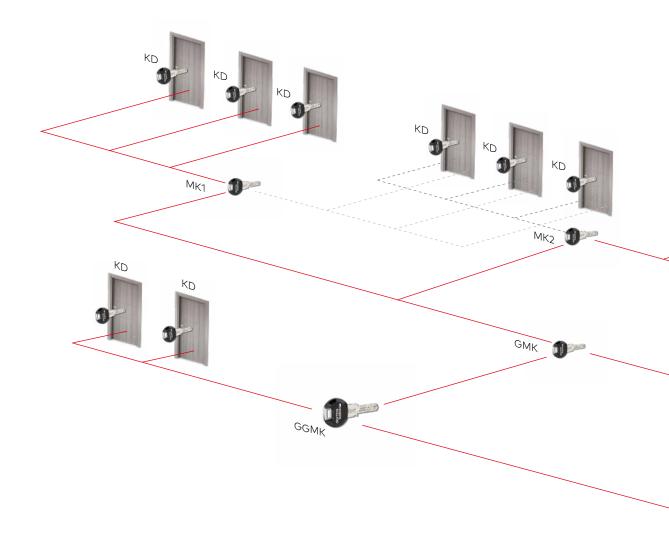

#### Master Key System (MK)

Each cylinder is opened by its own individual key and by the master key.

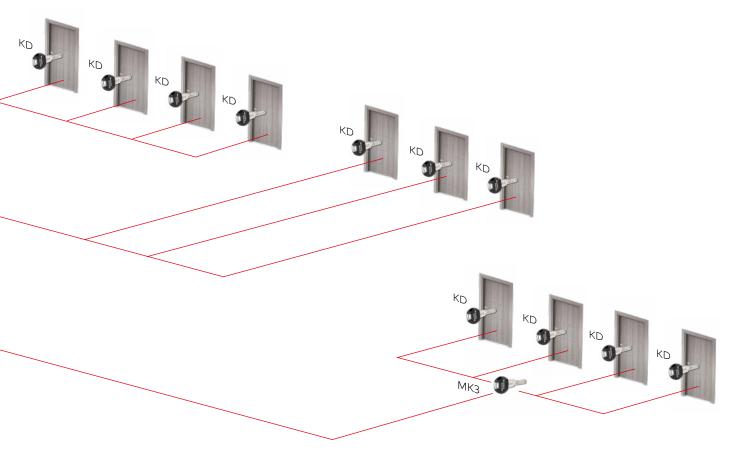

#### Grand Master Key System (GMK)

Each cylinder is opened by its own individual key, the master key and the grand master key.

#### Complex Master Key System

Individual keys or master keys belonging to different groups of cylinders can open one or more cylinders belonging to other groups and can be extended to the great grand master key system (GGMK).

# Applications

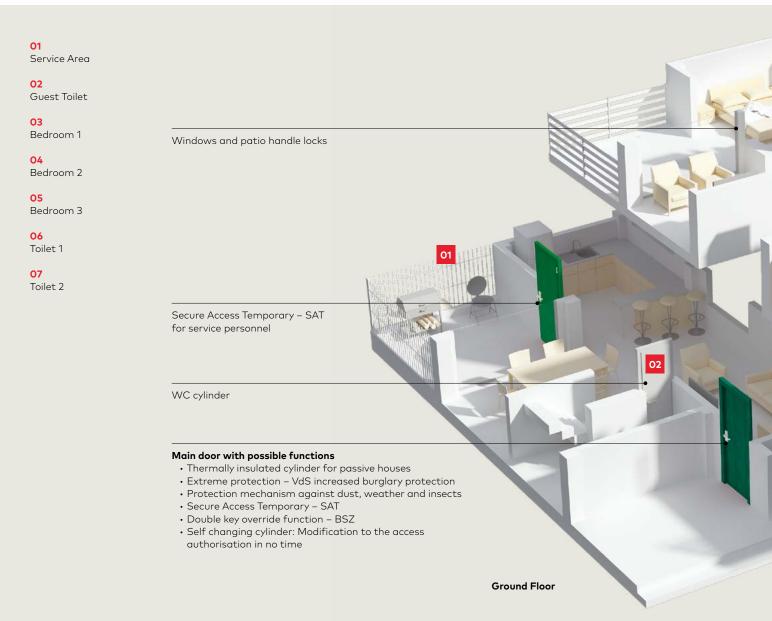

### Locking systems for private homes Convenience and security in one

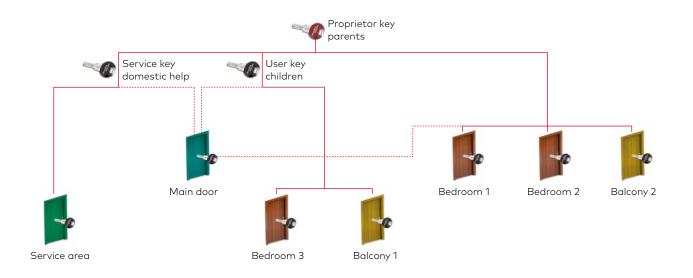

#### Home is where we feel the most secure and a solution that can reinforce that feeling is a boon to families in any part of the world.

Master key systems can be applied to various residential establishments – from small houses to large apartments or villas and from multistoried mansions to high rise apartment complexes.

In a house, for example, a keyed alike system could be implemented in such a way that the house owners would be able to open all the rooms of the house with one single key. So besides the front door, you can also open your letter box, cellar, garage and many other doors with a single key. The children of the house would be given a key that would only open the front door and their bedrooms. With the dormakaba lock cylinder and SAT (Secure Access Temporary) function domestic help would only be able to access the front door – if the proprietor key has activated the service function.

A master key system would ensure an added level of security and greater convenience to granting and restricting access to one's home.

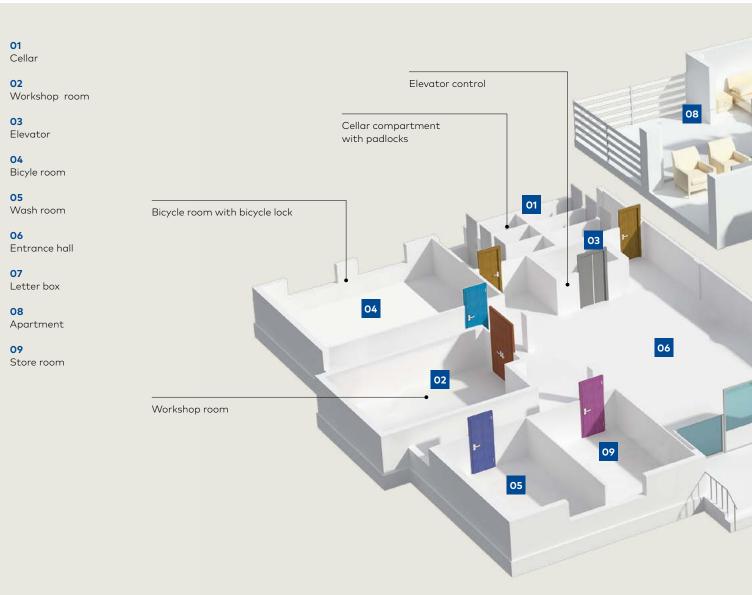

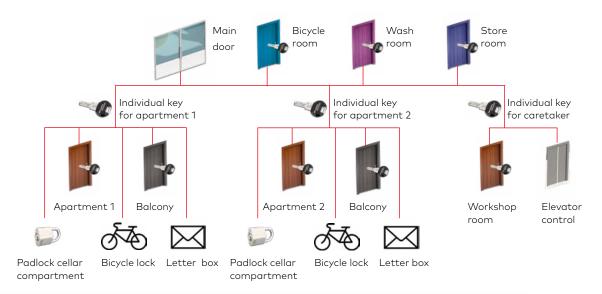

## **Central locking systems for apartment buildings** Security and organisation

Master key systems are used in apartment buildings. Main doors like the entrances to underground car parks and basements can be opened and closed by all tenants with their assigned apartment keys. However no key will open the door of another apartment. Master key systems can be expanded so that letterboxes, basement storage compartments or secure car parking in the communal garage can be assigned to the apartment key, thus reserving access for the respective tenant. Tenants need carry only one key around with them for all rooms. So caretakers do not have to procure, issue and supervise separate keys for communal doors. And their keys, in turn, only provide relevant access to doors like the main entrance and central communal and maintenance areas.

Ground Floor

## **Business offices and departments** Increased security with master key systems

Master key systems are ideal for offices and can be successfully applied in any commercial or private office space regardless of its size. A master key system not only increases security but also grants greater access convenience to the shared spaces between various departments. For example, each department in the office would need common access to the conference room door as it's a shared space. However the R & D room would be opened by a single masterkey held only by the head of the department owing to the extra security requirements of the department. This means that role-based access rights can be assigned for each employee with just one key.

WC cylinder

Individual key for external service providor

Master key systems can efficiently exclude and include entry according to a carefully prepared plan that enhances the working processes, access convenience and security protocols. Massive signature working environments in almost every corner of the world have substantially benefitted from our master key systems.

# **Education** Complex door situations including classrooms

Educational institutions have evolved from simple classroom structures and today have grown to massive complexes that accommodate multiple learning facilities. With numerous access points within a campus, maintaining a traditional key system can be very cumbersome and unsafe for the school management. That is where master key systems can substantially increase security. Small schools to large university campuses can greatly benefit from the increased security and hassle free operating mechanism of our master key systems. Further functions like lockers with furniture cylinders or the classroom function increase the security of the location and can also fit into the master key system.

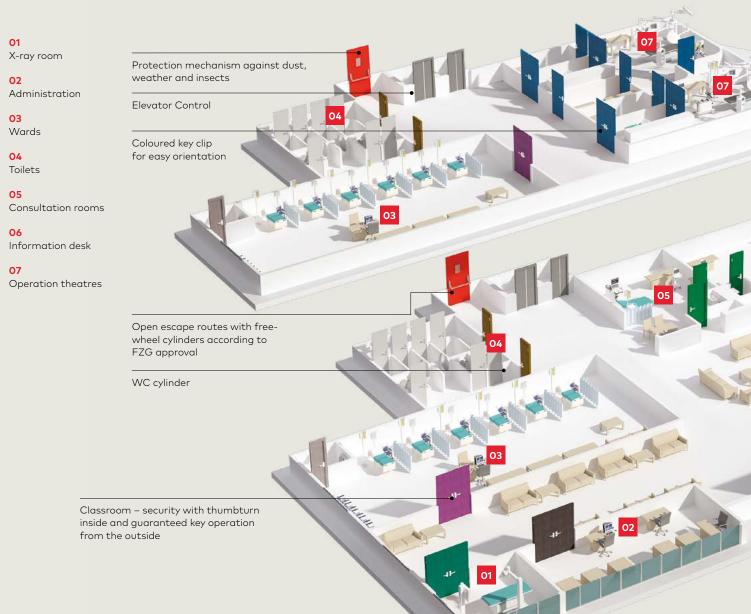

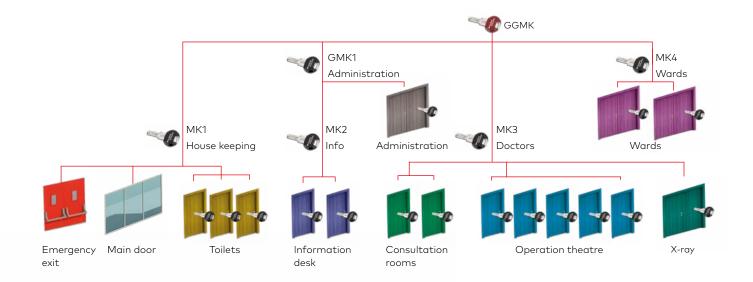

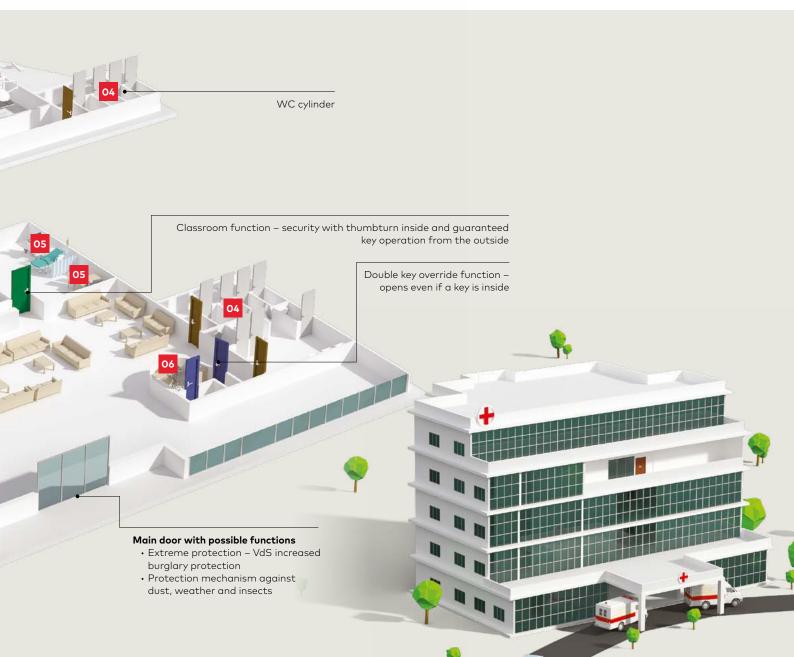

## **Hospital** Secure sensitive areas

Medical care facilities have several highly sensitive areas and hence regulating access becomes critical. In such a busy environment access control has to be made operationally very convenient and at the same time, technically fail proof. Implementation of a master key system to both small clinics as well as large hospitals can increase their efficiency considerably. By applying a master key system, a medical care facility could ensure much faster access to emergency facilities like operation theatres and at the same time strictly restrict access to hazardous areas with radioactive equipment. Medical care facilities across the globe rely on master key systems from dormakaba to ensure highly safe and secure medical environments for the patients, professionals and people in general.

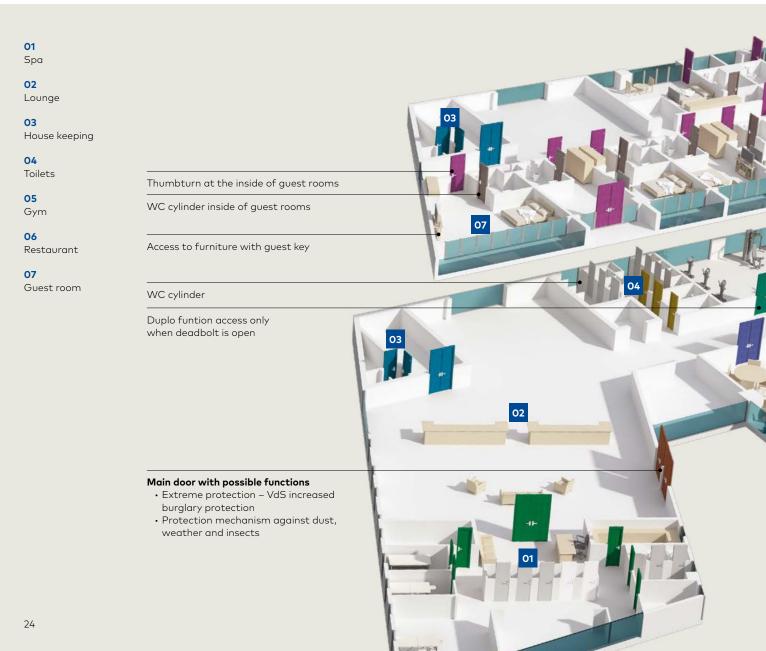

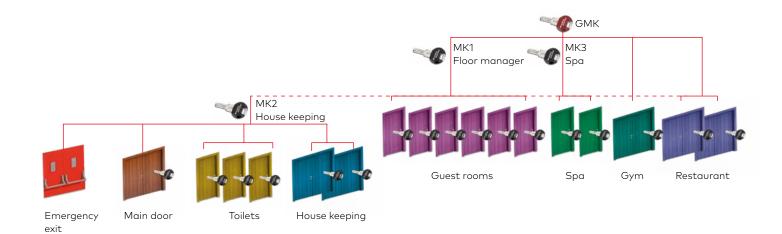

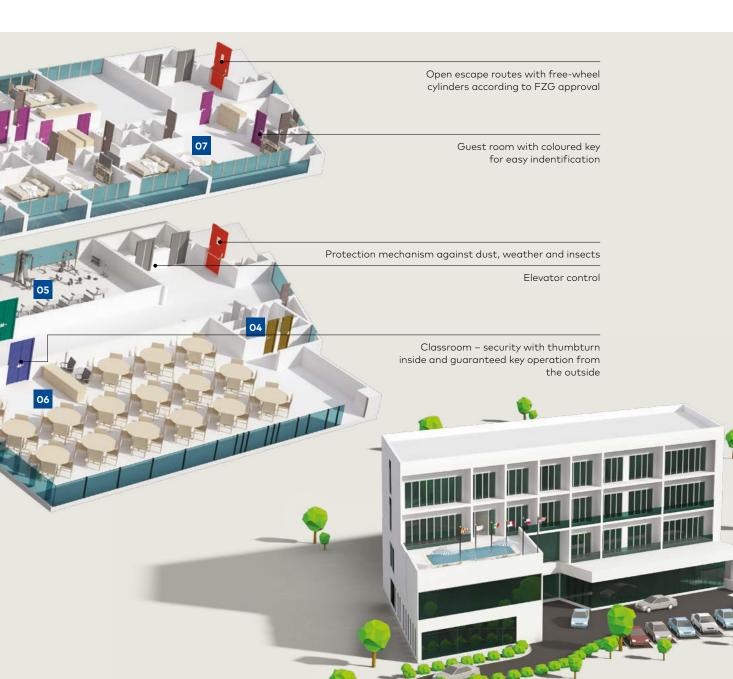

# **Hotel** Safe temporary home

A guest might select a hotel based on their preference for luxurious amenities, ambience or culinary reputation. But every time they walk into a hotel, a temporary home in a foreign land, the most important assurance sought is security, both of space – the room, and of personal information. A master key system can provide total security and convenience for both the guest and the hotel operator. Typical "back of house" hotel applications require secure locking in operational areas such as Food & Beverage management, Housekeeping as well as delivery zones. These areas are where valuable provisions and equipment needs to be securely managed. Guest Services and Financial Management areas are also where both valuable personal and financial information are processed and stored. Staffing in hotels is very dynamic with multiple shifts across any given day necessitating locking systems which offer high levels of security, functionality and ease of management. High staff turnover means the locking system needs to be able to provide the operator with secure unauthorised key copy protection and key management systems.

Master key systems with the dormakaba "Smart" keys can also work in concert with electronic door access cards and time in attendance systems. Its expandability, as the facility grows, means that for hotel and resort owners they can be confident their future plans can be accommodated with ease.

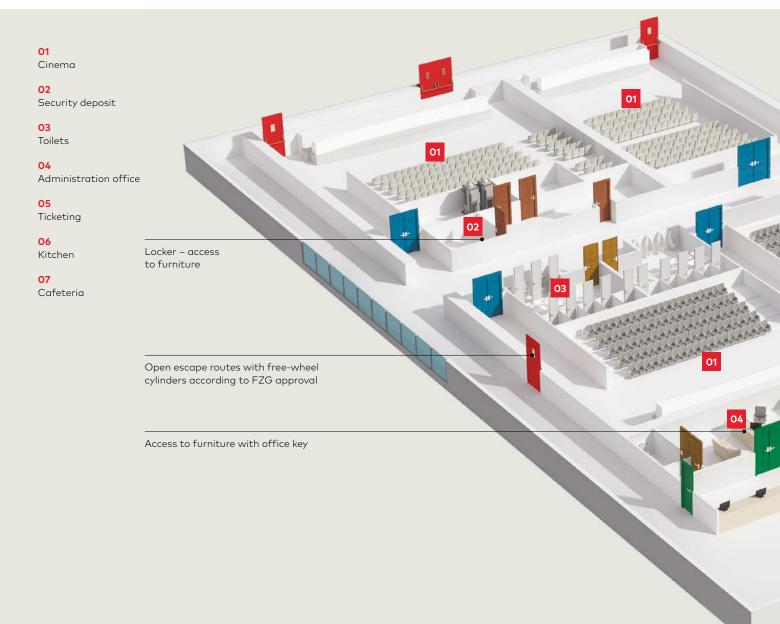

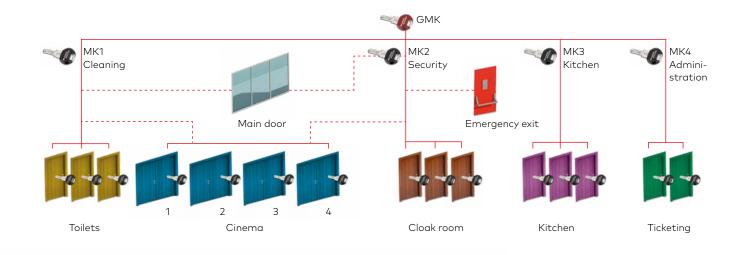

## **Theatres and cinemas** Security in entertainment

Entertainment is arguably one of the fastest growing industries and its avenues are growing at a much faster pace. Multiplexes are mushrooming even in smaller towns and as people flock in growing numbers to these spaces, better security becomes mandatory. The master key system seamlessly integrates the access mechanism for multiple screens at theatre complexes. Master key systems also very efficiently manage emergency exits at large commercial spaces like these and makes it extremely hassle free for the staff during an emergency situation. With the free-wheel cylinders according to FZG approval open escape routes are guaranteed in case of an emergency.

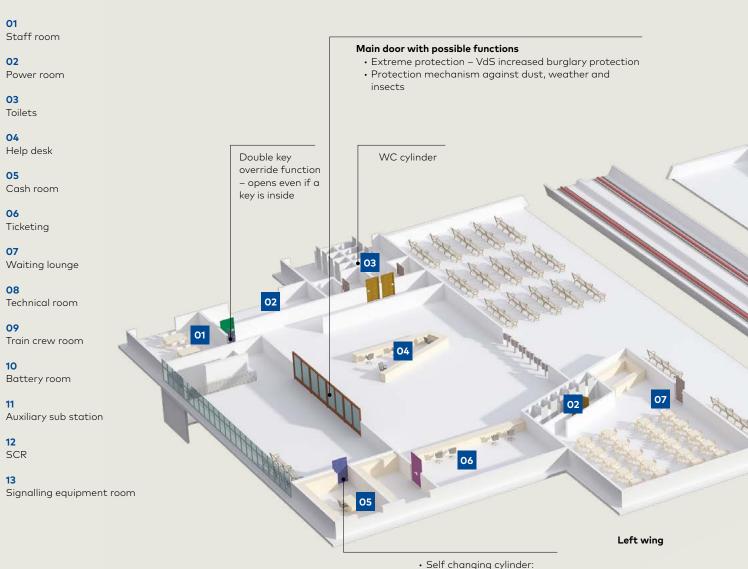

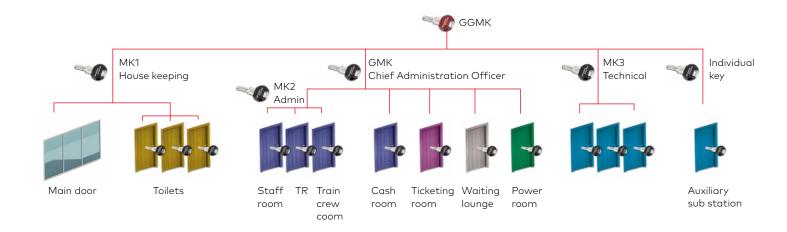

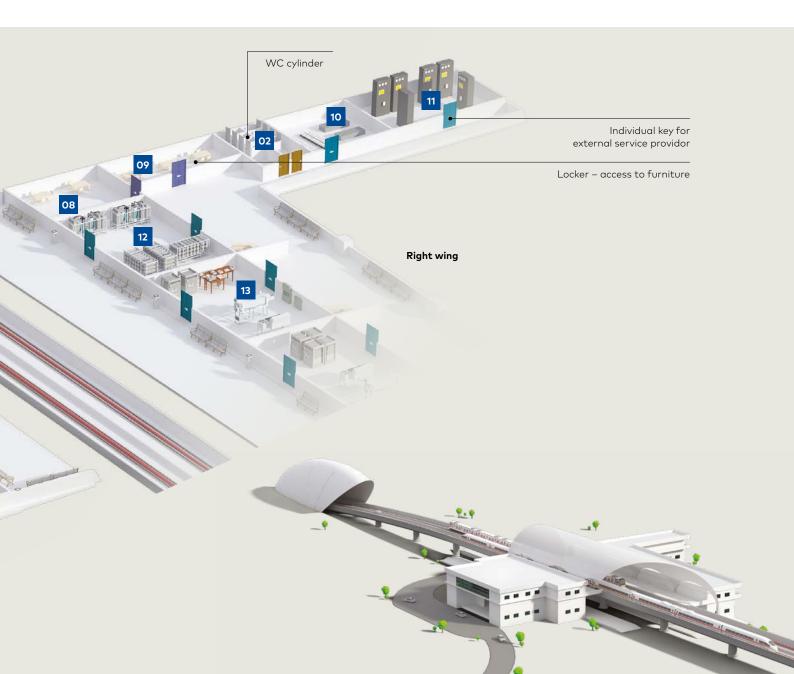

## **Train stations** Public space with high security areas

Threat levels at public spaces have exponentially increased the world over and today public spaces demand the highest level of security measures. For example, a train station involves very high public safety and also massive infrastructural costs. But due to the vulnerability of an open public environment like this, ensuring security becomes technically challenging. This is where master key systems come in handy. It distinguishes and facilitates easy movement across areas accessed by passengers yet strictly secludes high security departments such as the traffic control room, the ticketing cash room, the power room, signaling equipment room, etc. Several airports, train stations, malls and other public spaces around the world have been secured by dormakaba master key systems.

, ,	always open on the other side. So you cannot be		• Theatre/Cinema

Functions	Available systems	Applications
Restricted movement Cylinder (Classroom Function)		
The innovative design of the restrictive movement cylinder ensures the door is guarded against being locked from within the room. The cylinder also guarantees that authorised key operation from the external side is maintained even if the internal thumbturn is being held by the occupant in an attempt to prevent access.	<ul> <li>all reversible and serrated key systems</li> </ul>	<ul> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
Coloured key clips		
Keys are even easier to identify with coloured clips. The reversible keys are available as smart keys and large keys in 12 clip colours each. For dormakaba penta, you will receive a high-grade, bicoloured smartkey with a white and grey dormakaba logo. For serrated keys, you can choose from 11 colours for large clips and 5 colours for miniclips from our standard range. You can get our trendkey in the colours: dark blue, light blue, red, green and black. Keys with a metal bow are delivered without a coloured part as standard. But red, green and black colouring is available, if desired.	<ul> <li>all reversible and serrated key systems</li> </ul>	<ul> <li>Home</li> <li>Apartment buildings</li> <li>Office</li> <li>Train station</li> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
Emergency override key function		
For hotels, guesthouses, retirement homes, boarding schools, schools, etc., where the greatest security must be available for emergencies. The emergency key override function also fulfills the lockout function desired in hotel complexes. The advantage is that the special emergency key can be opened from the outside, even when there is a key inserted on the inside. Thus, the access is guaranteed at any time in an emergency. The emergency function can only be installed on one side and the emergency override key must be ordered separately.	all reversible and serrated key systems	<ul> <li>Apartment buildings</li> <li>Office</li> <li>Train station</li> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>

Functions	Available systems	Applications
Extreme protection – increased burglary protection		
High end security Pulling and drilling protection To protect your home from burglaries, you should switch to the latest technologies. The housing of this lock cylinder is strengthened with steel reinforcement plates for an additional pulling protection (fig. 2). The version with steel reinforcement plates is certified in accordance with BS EN 1303:2015-08 attack resistance grade D. Hardened steel pins in the insert and housing ensure an additional protection against drilling (fig. 1). These highly secure cylinders are certified in accordance with VdS B, BZ for individual locking and locking systems.	<ul> <li>all reversible and serrated key systems</li> </ul>	<ul> <li>Home</li> <li>Apartment buildings</li> <li>Office</li> <li>Train station</li> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
Padlock		
Integrated into your master key system you can also use padlocks with your key. Different types are available.	<ul> <li>all reversible and serrated key systems</li> </ul>	<ul> <li>Home</li> <li>Apartment buildings</li> <li>Education</li> </ul>
Secure Access Temporary – SAT		
In the normal (vertical) key removal position the cylinder can only be operated from the outside by the proprietor key. In the service position the lock cylinder can be opened and locked from the outside and inside by the service and proprietor keys. SAT-function with reversible key systems	<ul> <li>Only available with</li> <li>dormakaba expert plus</li> <li>dormakaba quattro plus</li> </ul>	<ul> <li>Home</li> <li>Apartment buildings</li> <li>Small business</li> <li>Education</li> </ul>
Keyway in normal Keyway in service position: 6 o'clock position: 8 o'clock		

Functions	Available systems	Applications
Duplo function		
Access to specific door Cylinders have two types of keys. One key operates the latch of the lock and the other key operates the latch and the deadbolt. When deadbolt is withdrawn, the key that operates the latch will work. When the deadbolt is engaged, the key that operates the latch will not work.	<ul> <li>all reversible and serrated key systems         <ul> <li>lock with interchangeable function required</li> </ul> </li> </ul>	<ul> <li>Apartment buildings</li> <li>Office</li> <li>Train station</li> <li>School</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
Protection mechanism against dust, weather and insects		
If required you can protect the outside of the cylinder and extend the mechanical life. Choose from different options – the insert dust and weather protection cap or the full cylinder protection device, whose spring loaded plates are pushed open when inserting the key and spring closed when the key is retracted.	<ul> <li>all reversible and serrated key systems</li> </ul>	<ul> <li>Home</li> <li>Office</li> <li>Train station</li> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
Thermally insulated cylinder – TIC		
Cold outside - dry inside The construction provides protection against condensation on the inside of the door (even in extremely cold outside temperatures). Additionally, it protects against rain and reduces drafts through the cylinder.	<ul> <li>all reversible key systems</li> </ul>	• Home
Thumbturn		
The thumbturn is on the inside and allows you to lock and unlock doors from the inside without a key. Depending on the application you can choose up to four different thumbturn models.	<ul> <li>all reversible and serrated key systems</li> <li>Designer knob Kaba penta only</li> </ul>	<ul> <li>Home</li> <li>Apartment buildings</li> <li>Office</li> <li>Train station</li> <li>Education</li> <li>Hospital</li> <li>Hotel</li> <li>Theatre/Cinema</li> </ul>
